

# Do your part to prevent storm water pollution:

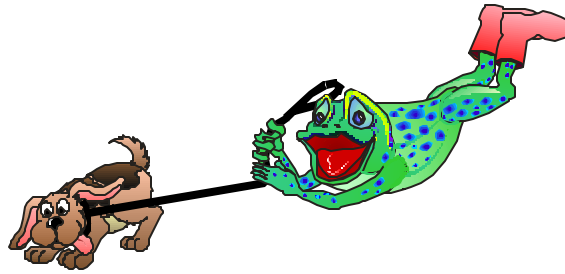

- Sweep grass clippings and leaves off sidewalks and streets and place in a compost heap or the trash.

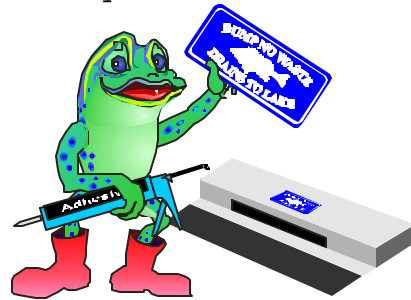

- Recycle used motor oil, paint, and other household chemicals at a hazardous waste collection site. For locations call 754-4112.

- Wash your car on the lawn. This will allow the ground cover to use nutrients from the soap.

- Clean up after your pet. Bury or dispose of waste in the trash (not in a storm drain or canal). Pet wastes can be a source of bacteria & excess nutrients to local waterways.

- Organize a Storm Drain Making event in your neighborhood. Call 754-4060 to find out how.

- For additional information or to report storm water pollution contact: Hemando County Public Works Department: 754-4060

- To report possible illegal dumping in storm drains call 754-4056.

## EXTRA! EXTRA! Frog Exposes Storm Water, The Mystery Polluter

By M. Phibian, Weekly Staff Writer

Just before the new millennium, weekly staff writer, M. Phibian, uncovers causes and solutions to non-point source pollution. Afer months of investigative work, storm water runoff was found to be the carrier of pollutants. But how did they get there?
