

Springs Coast Watershed
 Ground Water Pollution Potential
 to the Floridan Aquifer
 (D.R.A.S.T.I.C.)

These data, created in 1998, represent a composite view of seven separate layers of data which are depicted by the D.R.A.S.T.I.C. acronym. The layers were overlaid to produce the composite map. Each layer was digitized into the District's GIS from a 1:500,000-scale District-wide map. The layers were overlaid and the different values for each layer were added together to obtain the composite D.R.A.S.T.I.C. score. The potential for pollution is higher as the composite D.R.A.S.T.I.C. score increases.

Map Creation Date: February 23, 2001
